

Product

# Ti RAY/Ti LOW

The 2-way full range TiRAY and 12 inch extension Low TiLOW promise to provide volume which exceeds its class and uncompromising sound quality in addition to significantly reducing restrictions from installation environment while being small and light weight. All CODA products have characteristics of the linear phase from LINUS DSP and the significant advantage of being adjusted to match other CODA products in addition to the physical alignment in which CODA specializes. It is possible to select from a number of subwoofers. This system uses the built-in double 18 inch normal subwoofer U4 to create a reasonable and realistic structure. It is naturally possible to make a system including the highest quality CODA subwoofer, the SC series.
