Martin Audio MLA System

The recently popular MLA systems are used in various festivals and concert tours. An incredibly even acoustic pressure and sound quality which covers the entire venue is made possible through combining unprecedented and break-through optimized software and multi-cellular control. The Martin Audio MLA System is a system for the next generation which enables what was once impossible with current speaker systems such as not needing a delay speaker, controlling venue reflection and solving neighboring noise problems. A comparatively compact system used at events such as hall tours is on display at this exhibition.

System Diagram

	Product Name	Manufacturer	Model No.	Standard Price
Speaker	Multi-cellular Speaker	Martin Audio	MLA	OPEN
Subwoofer	Power Subwoofer	Martin Audio	MLX	OPEN
Amp	Built-in			
Processor	Built-in
